ACTIVE TIMES 2

Saturn's rings, and a giant storm that raged across the planet for nearly a year. The 22 by 13 foot (6.7 by 4 meter) spacecraft is also credited with discovering icy geysers erupting from Saturn's moon Enceladus, and eerie hydrocarbon lakes made of ethane and methane on Saturn's largest moon, Titan. In 2005, the Cassini orbiter released a lander called Huygens on Titan, marking the first and only such landing in the outer solar system, on a celestial body beyond the asteroid belt. Huygens was a joint project of the European Space Agency, Italian Space Agency and NASA. "The mission has changed the way we think of where life may have developed beyond our Earth," said Andrew Coates, head of the Planetary Science Group at Mullard Space Science Laboratory at University College London. "As well as Mars, outer planet moons like Enceladus, Europa and even Titan are now top contenders for life elsewhere," he added. "We've completely rewritten the textbooks about Saturn." Some 4,000 scientific papers have been based on data from the mission, said Mathew Owens, professor of space physics at the University of Reading. And its final plunge will reveal even more about the make-up of Saturn's atmosphere before Cassini disintegrates like a meteor. "No doubt scientists will be analyzing the information from its final, one-way trip into Saturn's atmosphere for years to come," Owens said.

Breakthrough in Gauri Lankesh

Police are using the lead from the CCTV footage to probe every angle and question those who worked with her about the threats she had faced. 55-year-old Gauri Lankesh, who was the editor of a Kannada weekly and a fierce critic of right-wing organisations, was shot dead at her house in Bengaluru on September 5. The murder led to widespread speculation that she was targeted by right-wing organisations.
